

To begin with it is necessary to say that I finished school №1 in Yaroslavl' and I'm going to enter the Yaroslavl' Technical University to get a profession of an engineer in the future.

I'm much interested in aeromodelling as in fact it makes my life more interesting and exciting. What's more I want my life to be connected with it and I hope I'll manage to be a good specialist in this sphere.

Speaking of aeromodelling as my hobby I find it entertaining and fascinating, it became so important for me that I began to read more books, magazines and newspaper articles about this thing. In addition to it I also try to find more information about aeromodelling in the Internet to be aware of all news and innovations in this direction.

During the competitions I visited different parts of our country and other foreign countries. It was very enthralling for me to speak about aeromodelling with other people who were interested in it too. Today I have more experience in this kind of sport than before and I easily help other teenagers with it. Thanks to this sport competitions abroad I started learning English with more interest and desire because I understand that I can communicate in it and discuss aeromodelling with other young people from different countries.
